SUMMARY

Fullstack developer focused on React / TypeScript (frontend) and Node.js / NestJS (backend), with ~2.5 years of commercial experience. I own features from architecture and design through to production: real-time over WebSocket, queues and transactions with Redis / BullMQ, SQL, and solving race conditions under concurrent access. Strong at diagnostics: I find and fix bugs that reproduce on one platform only.

KEY ACHIEVEMENTS

- Cut page load time from ~15s to ~2s — **~7x faster**
- Diagnosed and fixed a **critical iOS bug** in the eGov (SIGEX) integration
- **Single-handedly** drove an asset-accounting epic from design to production
- Built a **360° WebGL / three.js viewer** and a Kotlin kiosk with Face ID

EXPERIENCE · ~2.5 YEARS

Qazirgi Management — Frontend Developer (React + TypeScript) Dec 2025 — Present remote

- Cut page load time **from ~15s to ~2s** by restructuring data fetching into high-level polling.
- Built a 360° panorama viewer with WebGL / three.js: camera control (yaw/pitch), custom movement constraints, scene lifecycle optimization.
- Designed the client-side architecture of an inventory system (OS module): screens, navigation, Zustand state, real-time over WebSocket, roles and access control with an admin mode.
- Built a Kotlin kiosk app for guest authorization via Face ID.
- Built a landing catalog with filtering and a request form; refactored legacy code, improving stability.

Stack: React, TypeScript, Zustand, WebSocket, WebGL / three.js, Kotlin

Saqr Innovations Ltd. — Software Engineer (Fullstack) May — Jul 2026 on-site, Astana · in parallel with Qazirgi

- Drove an asset-accounting epic from scratch to production: designed and implemented the entire feature (frontend + backend) through many iterations of bugfixes.
- Extended the eGov (SIGEX) government-app integration: BACKURL return flow. Diagnosed and fixed a **critical iOS bug** via logging and systematic troubleshooting — restored correct behavior on all platforms.
- Designed transactions and background jobs with Redis, BullMQ and cron; resolved race conditions under concurrent access.
- Redesigned the UI and made UI/UX decisions that improved key user flows.

Stack: TypeScript, NestJS, Node.js, SQL, Redis, BullMQ, React

Freelance / Contract — Fullstack / Frontend Developer Nov 2023 — Nov 2025 remote

- **Verotour** — built a travel-agency website from scratch: responsive markup, integration of external tour/ticket search APIs.
- **DaftParty** — migrated the project from HTML5 to Vue 3 (Composition API, 12+ components), raised Lighthouse by **+15%**.
- **LST** — built a React SPA from scratch: component architecture, search with debounce/throttle, SEO optimization.
- **Vending startup** — fullstack: “select → pay → confirm” flow, backend/DB integration, admin panel.
- **Life Trend** — responsive landing from a Figma design (BEM, SCSS), cross-browser on 5+ device types.

Stack: React, Vue 3, TypeScript, Node.js, SCSS, Figma

SKILLS

Languages & DB

TypeScript JavaScript SQL PostgreSQL HTML5 CSS3 / SASS

Frontend

React Next.js Zustand Vue 3 WebGL / three.js

Backend

Node.js NestJS REST API TypeORM JWT Redis BullMQ WebSocket

Tools

Git Docker Vite / Webpack Figma

EDUCATION

Esil University — Information Systems, BSc 2024 — 2028
IT Step Academy — Frontend development 2019 — 2024

LANGUAGES

Russian — native
English — B2
